

Every person should have goals. They define how hard a person will strive, what they want to do, and why they want to do it. As every person should, I have set my own goals for my life and future.

One year from now, I hope I am finishing my first year of college. I plan on having a part time job, working and going to school. School is very important to me; I never give up a chance to learn something new, especially when it deals with electronic systems. I will most likely take a lot of math and technology classes. College will be challenging enough, but I also want my job to be challenging. I would love to be working part time as maintenance, repair, or installation of computer systems, mainly networks. In high school I took a number of technology courses, and this would be a perfect chance to applied what I had learned.

In four years, I hope to be finished with my bachelors degree in either Computer Science, Electrical Engineering, or one of the similar majors. If the timing is right and the market is good, I may continue with education, moving on to get a masters in one of the engineering majors. By now I wish to have started a full career, hopefully in the Information Technology business. I would not mind working for any company just as long my skills and knowledge are not going to waste.

After 10 years, I plan on being in the information technology business, working for a stable company. I want to apply all that I have learned both in school and on my own. I don't want to let anything I have studied to go to waste. If life permits, I would thoroughly enjoy continuing on with my education, either completing my masters or my doctorate, depending on how far I am. I will still be learning, although I am not in a school environment.

Over the next years, I want to apply a mixture of school knowledge and experience into one explosive career. I am enthusiastic about learning and in turn using this knowledge. The application of everything I had learned from high school to whichever degree I may complete is important, and therefore completing the degree is too.
